

# PICMG 1.3

Allows users to protect their investment in PCI (PCI-X) technology while taking advantage of the speed and increased bandwidth of PCI Express

## What is PICMG 1.3 ?

- Bringing PCI Express to your SBC increased speed and bandwidth

Designed to interface with PCI Express peripherals on a backplane. The PCI Express interconnects with the backplane and can operate at x1, x4, x8, x16, and more depending on the capabilities of both the SHB and the backplane.

- Support PCI (PCI-X) on board with flexibility

The optional PCI (-X) portion of the SHB interconnect with the backplane allows for 32-bit operation. The clock rate can be 33MHz, 66MHz, 100MHz, and 133MHz, depending on how the backplane and SHB are designed.

- Miscellaneous IO

SATA, USB, IPMB, SMBUS, Geographic Addressing, and PCI Wake Up to the backplane is specified. Simplified the cabling on SHB for the system.

## PICMG 1.3 Key Features

- PCI Express

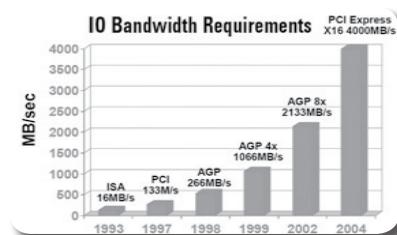

20 PCI Express lanes including x16, x4 and x1 PCI Express configuration are supported.

- Reset signal line defined

Common header defined on backplane for reset function

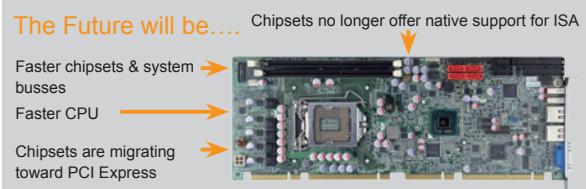

- ATX power signals are supported

AUX voltages for stand-by power and sleep states (Soft starts, wake-on-LAN). Supports PSON#, PWRRGD, PWRRBT#, and ACPI states.

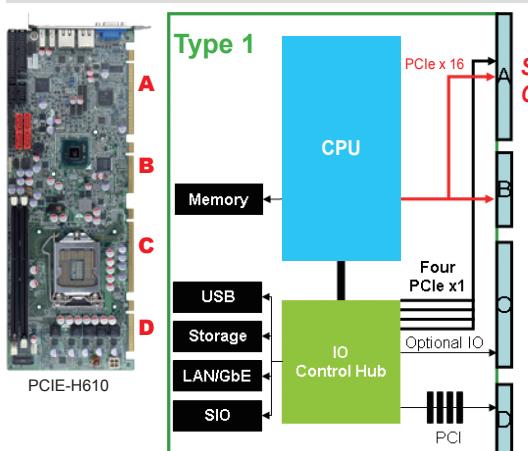

## Why PICMG 1.3?

- This new technology is expected to allow PCIe transmission rates to keep pace with processor and I/O advances for the next 10 years or more.
- Same basic mechanical dimensions are maintained to minimize chassis redesign expense
- Better host board power management and simplified I/O cabling
- Supports PCI Express and PCI option cards without driver changing

## IEI Server Grade Backplane Solution

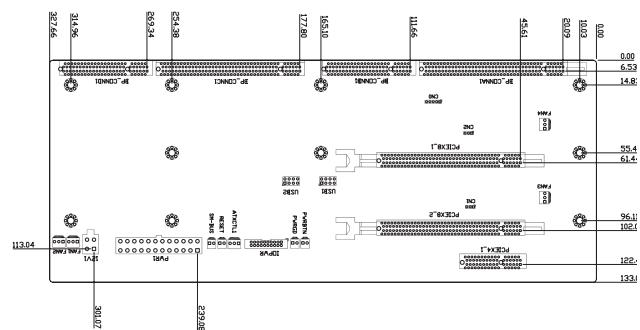

**Server grade backplane** accommodates PCIe x8 and multiple PCIe x4 add-on cards. It is specially designed for intensive data transfer applications such as server data storage and any application that requires more than one PCIe x4 or four PCIe x1 cards. Given the multiple PCIe x4 and x1 support, it provides a more cost effective solution for end-users by reducing the number of systems required.

# PICOe CPU Card

The Future of Half-sized CPU Cards

**PICOe-HM650**

## The advantage of PICOe

### PICOe = PCI + PCIe x4

- PCIe has excellent I/O bandwidth and performance
- Backwards compatible with half-sized CPU cards
- Backplane design for half-size PCIe CPU cards is easy

## The benefit of PICOe

- Same dimensions, backwards compatible but half the size of PCI SBC
- Higher performance as PCI only solution for the same price
- More configuration options for the same price

IEI Patent No CN.: 200986704Y

From SIPO (State Intellectual Property Office of The P.R.C)

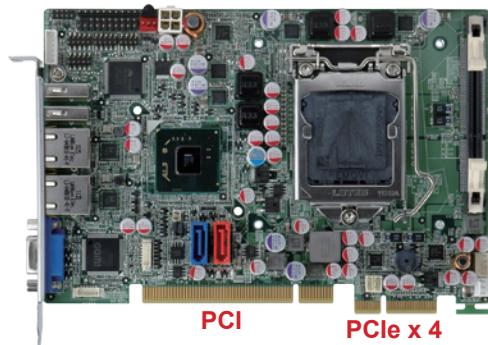

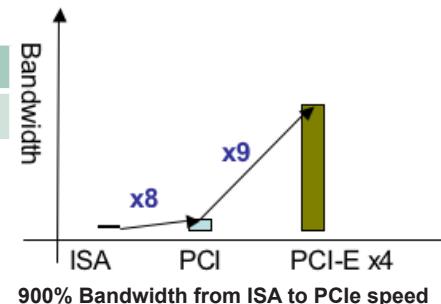

## ■ The advantages of PICOe

### • Increasing I/O bandwidth with leading technology

Specifications	ISA	PCI 33	PCI-E x4
Support	(16MB/s)	(132MB/s)	(1250MB/s)

### • Backwards Compatible with Half-Sized PCI Backplane and Chassis

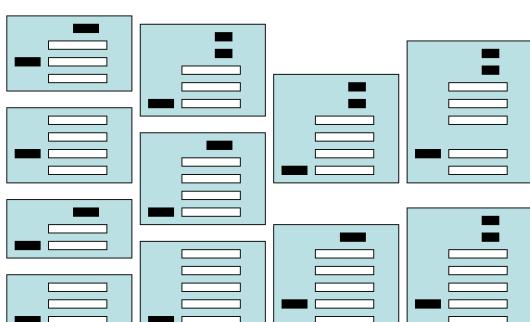

- Dimensions: 185 mm x 122 mm  
= All half-sized CPU cards
- Share the same Chassis & I/O design
- PCI pin definition same as PICMG 1.0 PCI  
= All half-sized PCI CPU cards
- Share all half-sized PCI backplanes
- Quick design backplane
- Four PCI slots and one PCIe x4 or four PCIe x1 lanes  
More configuration options on the backplane with a PCI and PCIe slot
- PCIe switches and bridges such as PLX or TI solutions

**PICOe-B650**

## ■ IEI PICOe backplane solution

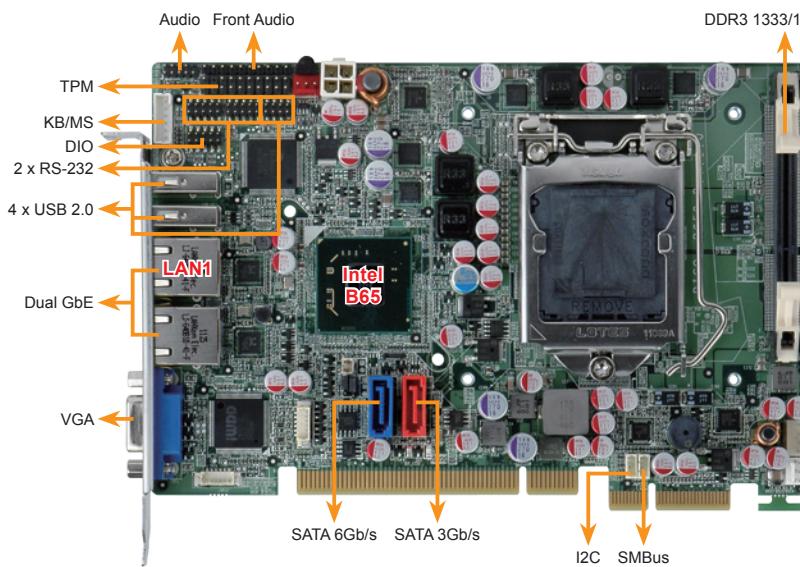

Complete PICOe backplane solutions fully support all kinds of chassis and power modes. PICOe is the easiest way to upgrade current systems from slow ISA+PCI architecture to the latest high performance PCIe+PCI solution.

# LAN Bypass Introduction

## What is LAN Bypass function

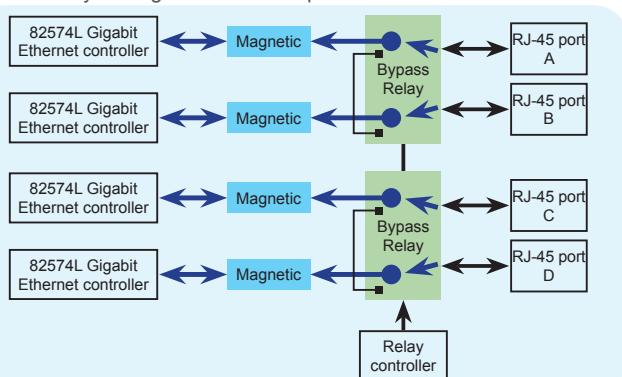

The LAN Bypass feature removes a single point of failure so that essential business communication can continue while a network failure is diagnosed and resolved. In the event of a power, hardware or software failure, Hardware Bypass will automatically activate, allowing network traffic to continue. Traffic between the LAN and WAN is allowed without interruption.

## Bypass function relay modes

The bypass function uses relays to route each of the two LAN port pairs in either “**bypass**” mode or “**normal**” mode.

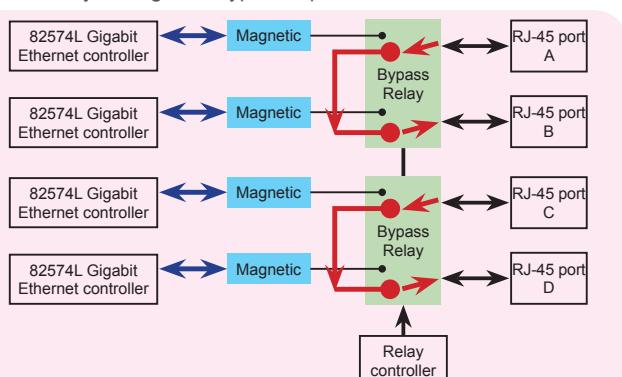

- A** In “**normal**” operation the magnetics are connected to the RJ-45s.

Relay settings for “normal” operation:

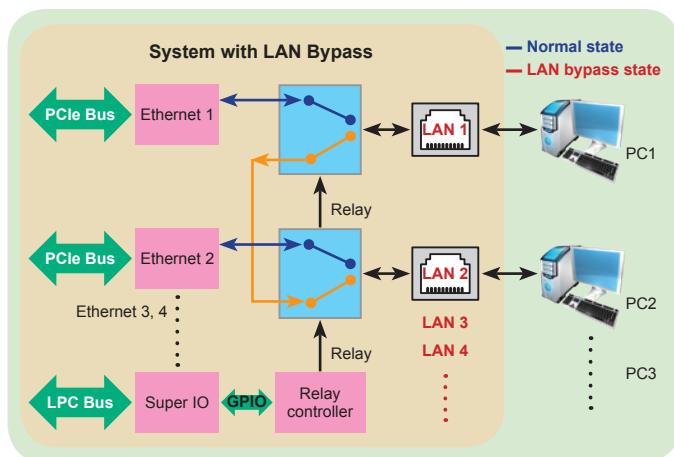

- B** In “**bypass**” operation the RJ-45s are connected together so that they form a piece of wire.

Relay settings for “bypass” operation:

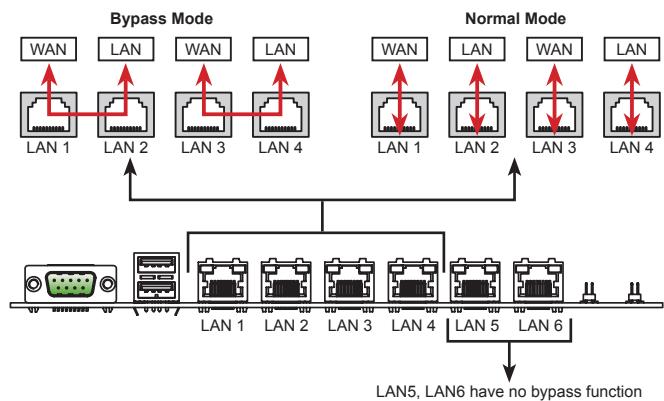

## Bypass function block diagram

The bypass function block shown below depicts the block diagram for one pair of Local and Remote ports on the 4-port 10Base-T/100Base-TX/1000Base-T Ethernet board with bypass.

## Best Choice from IEI

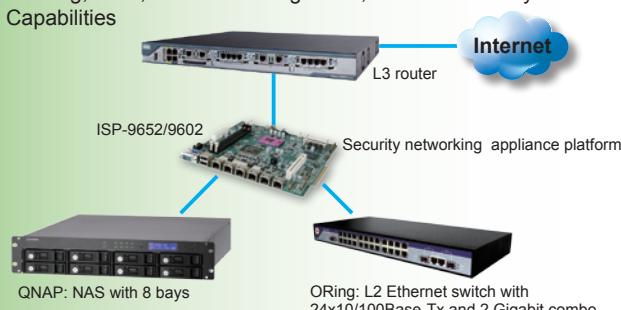

IEI ISP series product features a PCIe LAN bypass adapter card. It has a LAN bypass function that, in the event of a system hang, power down, hardware or software failure, allows Hardware Bypass to automatically activate and let network traffic to continue. The bypass function can be controlled by software, or by a watchdog timer configurable for 1-16 second operation. The adapter card can be migrated with concurrent network appliance platforms for network security applications and embedded box solutions.

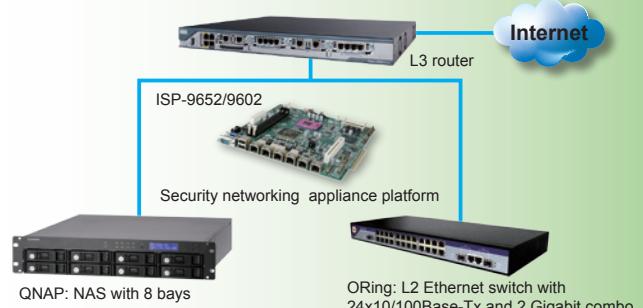

## Applications

### Security Networking Appliance Platform:

Firewall, Virtual Private Network (VPN), IDS/IPS, Content Filtering, UTM, Network Management, Network Security Capabilities

- The LAN Bypass feature guarantees uninterrupted connection to the Internet, even if the networking appliance platform fails.
